

Welch Allyn and Allscripts® Connectivity

When it comes to vitals documentation, every second counts. That's why Welch Allyn and Allscripts have collaborated to help clinicians like you work more efficiently without compromising care.

Welch Allyn Connex® vital signs devices connect with the APIs for Allscripts Sunrise™ to send verified vital signs data from the device at the bedside to the EMR—**no manual intervention required.**

Real Workflows and Real Results

A major New York metropolitan hospital chose this connected solution to help improve its clinical workflows and reduce errors.

Previous workflow:

1. Take patient's vital signs
2. Document on paper
3. Open Sunrise
4. Type in vital signs

Connected workflow:

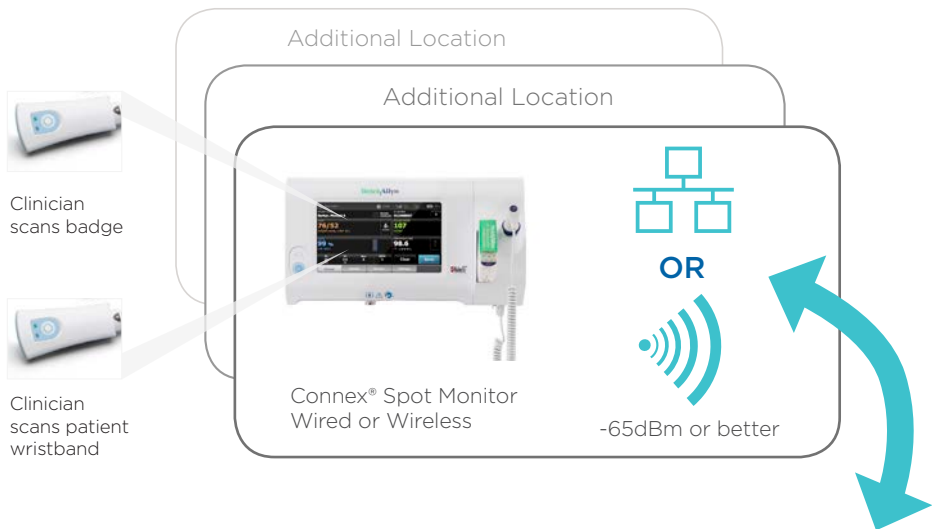

1. Take patient's vital signs
2. Tap "save." Vital signs are automatically sent to Sunrise with no further user input required.

The hospital estimated a time savings of **nearly 50 hours per day across its three facilities.**

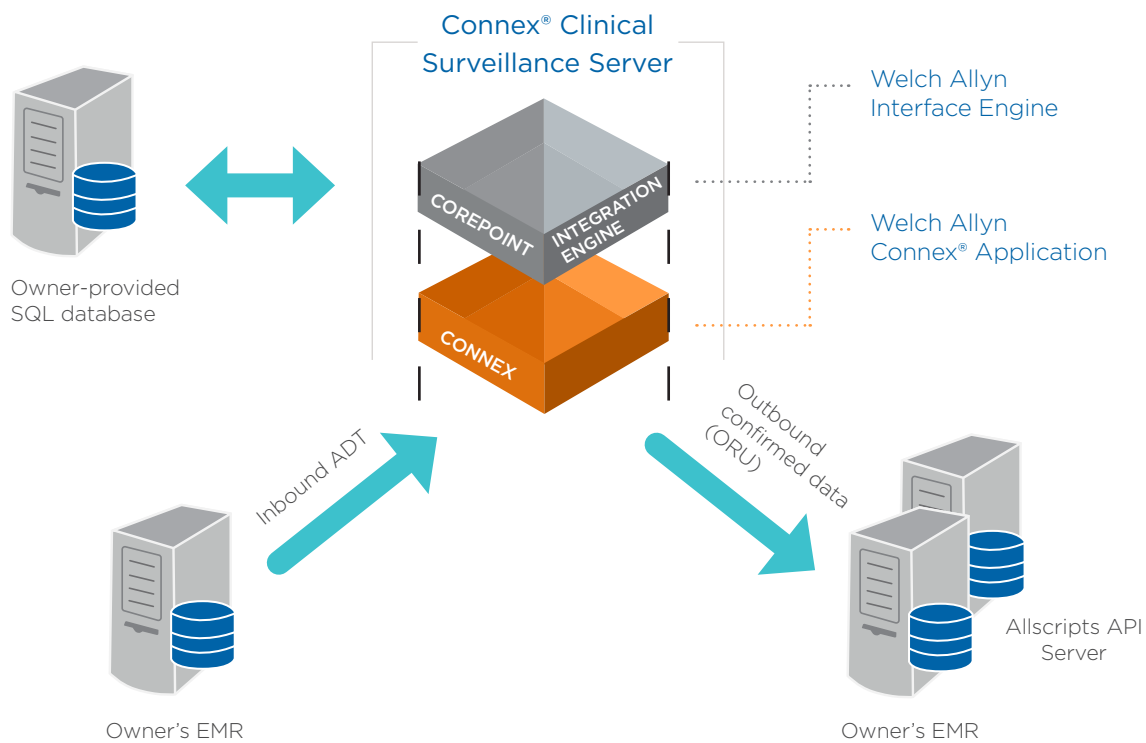

Connectivity Counts

The impact on time savings, accuracy and clinical workflows is significant.

- **Save time** previously spent manually entering data into the EMR
- **Help improve accuracy** by avoiding manual processes and associated errors
- **Work more efficiently** by freeing up time for other priorities

Customer Data Center (Onsite or Offsite)

Visit the Allscripts Application Store (store.allscripts.com) today for more information regarding supported Allscripts integrations. Contact your Allscripts representative for a connectivity quote.
