Product Description

Lifting very heavy patients requires special techniques and specially designed lift equipment. Liko has developed the Ultra product series to help lift such patients in a safe and comfortable manner.

The Liko Ultra LiftPants sling also give very heavy patients the chance to practice standing and gait training without risk of falling. They also reduce the risk of injuries to caregivers.

The Liko Ultra LiftPants sling aid in safe standing and gait training for patients with poor balance and poor leg function. It is essential that the patient is able to bear weight on their legs. The LiftPants allow the patient to move while relieving him/her of a greater or lesser degree of body weight.

The Liko Ultra LiftPants sling are equipped with two hip straps on either side for more even weight distribution. There are two different sizes.

Selecting a suitable lift

It is recommended that at least two caregivers be present when transferring a patient.

The Liko Ultra LiftPants sling can be used along with Liko's overhead or mobile lifts. An overhead lift can be used by the patient for unrestricted movement within the lift's lifting area. You can choose between:

- Liko’s UltraTwin system with two lift units. The maximum load is 500 kg (1100 lbs.), depending on which individual products are included in the assembled lift system.
  The UltraTwin system is available for both stationary installation and for freestanding installation in the UltraTwin FreeSpan™.
- LikoGuard™ L overhead lift for lifting up to 272 kg (600 lbs.) or LikoGuard™ XL overhead lift for lifting up to 363 kg (800 lbs.).
- Viking™ XL mobile lift for lifting up to 300 kg (660 lbs.). May be equipped with arm rest to give extra support during standing- and gait training.

In this document, the person being lifted is referred to as the patient and the person helping them is referred to as the caregiver.

Symbol description

⚠ is a warning triangle used for situations which require extra care and attention.

Safety Instructions

⚠ Before lifting, keep the following points in mind:

• A responsible person within your organization should decide on a case-by-case basis whether one or more caregivers are needed.
• Ensure that the sling selected meets the patient’s needs with reference to model, size, fabric and design.
• The total maximum load for a lift system is always determined by the product in the system with the lowest specified maximum load.
• For safety and hygiene reasons, use individual slings.
• Plan the lifting operation so that it can be done as safely and smoothly as possible.
• Check that the lifting accessory hangs vertically and can move freely.
• Although the Liko sling bars are equipped with latches, special caution must be exercised: before the patient is lifted from the underlying surface, but when the straps are fully extended, make sure the straps are correctly connected to the sling bar hooks.
• Never lift a patient higher off the underlying surface than is needed to complete the lifting and transfer procedure.
• Never leave a patient unattended during a lifting situation.
• Make sure that the wheels on the wheelchair, bed, gurney, etc., are locked during the lifting/transfer operation.
• Always work ergonomically. Use the patient’s ability to actively participate in the operations.
• When the sling is not being used, do not place in direct sun light.

Medical Device Class I Product

Liko Ultra LiftPants complies with the harmonized standard ISO10535:2006

The management system for both manufacturing and development of the product is certified in accordance with ISO9001 and its equivalent for the medical device industry, ISO13485. The management system is also certified in accordance with the environmental standard ISO14001.

Design and Quality by Liko in Sweden

Liko’s products undergo continuous development, which is why we reserve the right to make product changes without prior notice. Contact your Hill-Rom representative for advice and information about product upgrades.

IMPORTANT!
Lifting and transferring a patient always involves a certain risk. Read the instruction guide for both the lift and lifting accessories before use. It is important to completely understand the contents of the instruction guide. The equipment should be used only by trained personnel. Ensure that the lifting accessories are suitable for the lift being used. Exercise care and caution during use. As a caregiver, you are always responsible for the patient’s safety. You must be aware of the patient’s ability to handle the lifting situation.
Care and Maintenance
Check the sling before each use. Check the following points with regard to wear and damage:
- Fabric
- Straps
- Seams
- Suspension loops
- Buckle
⚠️ Do not use damaged lifting accessories.
If anything is unclear, please contact the manufacturer or supplier.

If the sling is used for bath or shower: After use in bath and shower situations, the sling should be placed so that it dries as soon as possible.

Washing instructions: Please see the sling’s product label and the attached appendix “Care and Maintenance of Liko Slings”.

Expected Life Time
The product has an expected life time of 1-3 years during normal use. Expected life time varies depending on the fabric, use frequency, washing procedure, and weight carried.

Periodic Inspection
The product must be inspected at least once every 6 months. More frequent inspections might be required if the product is used or washed more often than normal. See Liko’s protocol “Periodic Inspection Liko Textile Products”.

How to Attach an Ultra LiftPants Sling to a Sling Bar with 4 Hooks
(Twin Bars and Cross Bars)

1. Pull the front section of the LiftPants sling up between the legs so that the hip straps are accessible from the front.

2. Feed the front suspension straps through the loop straps using the appropriate loop (see page 8, Adjusting the Loop Straps).

Applying the LiftPants

The initial position when using the Liko Ultra LiftPants sling are the sitting position. The patient leans to the side so that the LiftPants sling can be slid into place under the buttocks. Place the LiftPants sling as far under the patient as possible with the product label facing out from the back. Make sure that the LiftPants sling are centered and in a good position with as much pant material in back as in front. Adjust as needed.

Alternative application of the Liko Ultra LiftPants sling: The patient can be lifted in a normal sling and then lowered onto the LiftPants sling placed on a chair or at the edge of the bed. The sling used can be e.g. the Liko UltraSling Mod. 06, Liko Original HighBack Sling Mod. 200 or Liko Soft Original HighBack Sling Mod. 26. This application makes it easier if for some reason the patient cannot lean to the side, or if there is no room to apply the LiftPants sling from the side.
Before assisting the patient to his/her feet: Make sure the patient has a steady footing on the floor to lighten the load during the raising. Run the lift slightly upwards to apply tension to the suspension straps without lifting the buttocks, and make sure that the loop straps are providing adequate support around the patient’s upper body.

During the lifting operation: Pull the lift forward in the direction of movement so that weight transfer takes place properly until the patient is upright and well-balanced.

Fasten the hip strap’s buckles and pull tight. Depending on the size of the patient, either one or both hip straps may be fastened from the standing position.

Connect the rear suspension straps onto the rear hooks on the sling bar, or onto the rear sling bar. Connect the front suspension straps to the front hooks on the sling bar or to the front sling bar. The outermost strap loop is the most commonly used. See page 5-6 for instructions on how to attach the sling loops to different sling bars.

When the patient has gained his/her balance standing, the lifting height is adjusted to provide appropriate relief with help from the LiftPants sling. Gait training can now begin!
Adjusting the Loop Straps

The loop straps should be neither too loose nor too tight around the upper body. Resistance with comfort is best. A smaller person can have the suspension straps fed through an inner loop. A larger person can have the suspension straps fed through an outer loop.

Loop Clips

A practical accessory for indicating the loops that work for a certain person. This makes it easier for caregivers to choose the right loop when applying the LiftPants sling.

Removing the LiftPants

Loosen the hip straps before lowering the patient down into a sitting position to avoid undue pressure from the hip straps. The patient leans to the side. Seize hold of the outer corner of the rear part of the LiftPants sling. Now fold the LiftPants sling in under itself and pull it away.
Choosing the Right Size

Choosing the right size is important for a safe and secure lift and for reaching the required lift height. Liko Ultra LiftPants sling should reach above waist height but not so high that the loop straps cut into the armpits. Refer to the measurement table below for guidance. Size XXXL has higher fabric sections and longer hip straps in order to reach around a larger belly. △ Do not choose too large size as this can mean that the required lift height cannot be achieved.

Choosing the Right Size

Accessories

**Padded cases for shoulder strap**
Prod. No. 3666021
Pressure-relieving padded cases for mounting onto the forward and/or rear suspension straps.
The padded cases come with Velcro along one longitudinal side for easy mounting.

**Solo Cover for Ultra LiftPants (XXL/XXXL)**
Prod. No. 3692908
Solo Cover for Ultra LiftPants sling (XXL and XXXL) is a protective cover made from disposable material. It is used to avoid dirtying the LiftPants sling and to prevent contagion.
